

1. Open (Opening Price)

The price at which a stock trades when the market opens for the trading day.

Reflects market sentiment overnight or during pre-market trading hours before the official exchange opens.

2. High (High Price)

The maximum/highest price at which the stock traded during that specific period.

Shows the peak level of buying interest (bullish pressure) during the session.

3. Low (Low Price)

The minimum/lowest price at which the stock traded during that specific period.

Shows the lowest price sellers pushed the stock down to (bearish pressure) during the session.

4. Close (Closing Price)

final price at which a stock trades when the market closes for the day.

Widely considered the most important metric of the day, as it serves as the primary benchmark for analyzing performance, calculating historical returns, and drawing chart patterns.

5. Volume

The total number of shares bought and sold during that specific time frame.

Measures overall trading activity, market liquidity, and investor interest. High volume indicates strong conviction behind a price movement, whereas low volume suggests weak enthusiasm.
